I can't keep you in the dark any longer. After several requests, I'm going to shed some light on making custom fused glass and iron wall sculptures and sconces in an exciting new class. In this four day workshop you will learn how to conceptualize and build a three dimensional work of art. You will be guided step-by-step from design to fabrication. We will cover methods for affixing glass to metal, techniques for professional metal finishes, plus how to select and attach lighting. In addition, you will be given details on how to produce a product easily prepared for a seamless installation.

Is this class for you? Make no mistake this will not be a posh trip to the spa. It will be a fun filled week of getting down and dirty with hard core glass fusing and bending raw steel. It's time to liberate both your mind and hands, setting them free to illuminate the pathway to innovative new creative destinations.

Join us in our casual, open air studio
January 27 – 30, 2009
No previous experience needed!

Register early, seating is limited.
Registration deadline January 6, 2009
